OIT-0946-88

28 SEP 1988

MEMORANDUM FOR: Director of Personnel

FROM: 

Acting Director of Information Technology

SUBJECT: Terminal Ports in the New Headquarters Building

REFERENCE: Your memo, dtd 15 September 88, Same Subject  
(OIT 0928x-88)

1. I support your goal of providing every OP employee with a workstation linked to the mainframe. OIT is prepared to work with you to provide New Headquarters Building (NHB) mainframe connections for each of the workstations OP either has in place now or will purchase during fiscal year 1989 (FY-89). We cannot, however, provide each of your  NHB desks with a LanMark 3270 connection in the absence of a matching workstation.

2. As I understand it, OP has the funds to purchase approximately 80-100 new workstations during FY-89. If you can confirm a more specific number, I will approve the installation of that number of additional LanMark 3270 connections beyond your current holdings. It is imperative, however, that your workstation plans are included in the ongoing data/voice survey and that your final requirements are identified in the next two weeks. In future years, as your funding permits, we can increase OP's number of workstations and mainframe connections. Naturally, a part of OP's expense of a new workstation will be the LanMark 3270 connection equipment costs.

3. OIT simply is not funded to provide 100 percent of the NHB employees' desks with mainframe connections. The data and voice survey policy we have taken with each of our customers has been the same. If your Executive Officer will send  Chief of the New Building Project, a memorandum to confirm your specific FY-89 workstation purchase plans, we will accommodate them prior to your relocation to NHB.
